Velebit and the chamois (Goran Šafarek)

VELEBIT

With an area of more than 2200 km², Velebit presents habitats for species with big home ranges such as large carnivores, **the chamois**, **the golden eagle** and **the capercaillie**.

Velebit has a variety of different habitats, which are home to many interesting mountain species, such as **edelweiss**, **mountain pine**, **alpine chough**, **white-backed woodpecker**, **boreal owl**, **dotted stem bolete** and others.

DISCOVER VELEBIT

Due to the exquisite richness of its underground habitats, Velebit is important for many different endemic species of underground fauna.

You can see numerous endemic species on Velebit, such as **Velebit degenia** and **Croatian sibirea**.

Even though its magnificence has been attracting numerous researchers for decades, it is still possible to discover something new and contribute to the knowledge about the richness of the biological, geomorphological and paleontological treasury of Velebit mountain.

WILDLIFE WATCH

Within the **Wildlife Watch** project, suggestions were made for educational trails which allow you to experience nature in a unique way, while discovering the wildlife of Velebit.

You can find more information about hiking and biking trails, along with other content, at www.govelebit.com.

BIOSPHERE RESERVE

Velebit is a part of the World Network of Biosphere Reserves, as proclaimed by UNESCO.

The purpose of Biosphere reserves is to secure the preservation of landscapes and biodiversity, to ensure sustainable development and growth, and to promote education on all levels.
